

Bron24 Internship Assignment — Feature Design & Web Demo

Duration: 1 month **Team size:** 6 interns, split into 3 pairs **Goal:** Each team invents one new feature for the Bron24 platform and builds a working, publicly hosted web demo of it.

1. Overview

Bron24 is a sports venue booking platform operating in Uzbekistan, with iOS and Android apps and a web platform. Your assignment is to **invent a genuinely useful new feature** within an assigned problem area and build a **clickable web prototype** of it.

You will **not** have access to the real Bron24 codebase or database. You build standalone web demos with mock (fake) data. The point is to produce real feature ideas and to show clean, working frontend work.

2. Teams

Team	Members
Team A	Ashish Singh, Raj Singh
Team B	Dhruv Dhayal, Anurag
Team C	Rhythm Saxena, Vinay Tevathiya

Changing teams: If you want to switch teams, you must:

1. Get agreement from the person you want to swap with — they must accept.
2. Announce the swap in the group chat so everyone is informed.

No silent swaps. No swap is valid until both steps are done.

3. Problem Areas (one per team)

You are assigned a **problem area**, not a fixed feature. You invent the specific feature inside it. Keep the scope small — a focused, finished feature beats an ambitious unfinished one.

Team A — Reducing dropped bookings

Many bookings are started but never completed/paid. Invent a feature that converts more of them. Examples (pick one or invent your own): smart payment reminders, one-tap

rebooking, a clear hold-timer countdown, or a waitlist when a slot is already full. **Demo flow:** booking → payment, with your feature added.

Team B — Group / social booking

Sports bookings are rarely solo. Invent a way for users to book together — invite friends to a slot, split the payment across players, or a shareable "join my match" link. **Demo flow:** creating a booking and inviting / splitting with 2-3 mock friends.

Team C — Loyalty & engagement

Give users a reason to come back. Invent points per booking, streaks, a referral program, or tournament / leaderboard pages. **Demo flow:** a profile / rewards screen plus the flow that earns the reward.

4. Design Constraints

Do not invent a new look. Your feature must look like it already belongs inside Bron24.

- Study the existing Bron24 web and app first. Extract the current **color palette, typography, button styles, spacing, and component style**.
- Design strictly within that existing theme and palette. Do **not** introduce new brand colors or a different visual style.
- If something is genuinely missing from the existing design system, ask before adding it.

Reference — study these before designing:

- Web platform: <https://bron24.uz>
 - Mobile app: <https://onelink.to/y7cf4z> (opens Play Store on Android, App Store on iOS — install and use the real app)
-

5. Deliverables (same for all 3 teams)

1. **Hosted web demo** — a standalone web app (plain HTML/CSS/JS or React), with mock data and no backend. It must be **publicly accessible at a live URL**. Free hosting options: Vercel, Netlify, or GitHub Pages. The core flow must be clickable end to end.
 2. **Private GitHub repository** — all code lives in a private repo. After the demo is finished, invite the supervisor as a collaborator on GitHub: **umidjon-2231**.
 3. **One-page writeup** — what problem the feature solves, what it does, who benefits, and a rough idea of how it would work technically.
 4. **Live demo** — a 5-minute presentation of the feature at the end of the month.
-

6. Timeline (4 weeks)

Week	Milestone
------	-----------

Week 1	Study Bron24 web + app. Lock the feature idea within your problem area. Design the screens / wireframes matching the existing theme and palette. Idea + design approved by supervisor before moving on.
--------	--

Week 2	Build the core screens and UI.
--------	--------------------------------

Week 3	Build the full interactive flow with mock data. Polish.
--------	---

Week 4	Deploy publicly, finalize the one-page writeup, set up the private GitHub repo and send invites, prepare and give the demo.
--------	---

7. How You Will Be Reviewed

- Does the feature solve a real Bron24 problem?
- Is the flow actually complete and clickable, not just static screens?
- Does the design respect the existing Bron24 theme and color palette?
- Is the code reasonably clean and organized?
- Did the team meet the weekly milestones?

8. Rules / Reminders

- No access to the real Bron24 codebase or database. Mock data only.
- Keep scope small — finish something that works.
- Repos stay private until the demo is done.
- Ask questions early. A wrong assumption caught in week 1 is cheap; in week 4 it is expensive.
